

## LIFE medCLIFFS CONSENSUS LIST

The **LIFE medCLIFFS Consensus List** is composed by a total of 94 plant taxa not to be planted or marketed on the Costa Brava and Cap de Creus areas.

All those taxa meet at least one of the following criteria:

Criteria	Definition
1	Commercialized species which are also monitored in the LIFEmedCLIFFS project: plants that show obvious invasiveness or a high potential to become invasive in the coming years in the Costa Brava
2	Invasive species in Catalonia, according to Sáez & Aymerich (2021)
3	Invasive species in Catalonia according to EXOCAT report "The exotic species of Catalonia. Summary of the Exocat 2021 project" (Rotchés-Ribalta <i>et al.</i> , 2022)
4	Species considered invasive throughout the Spanish territory. Based on the work Saez <i>et al.</i> (2011)
5	Invasive or potentially problematic species according to expert judgment of the LIFE medCLIFFS IAPS Working Group <sup>1</sup> , as a result of its meetings during Action C4
6	Species whose import, cultivation and commercialization is prohibited in Spain, at least at peninsular level, and/or throughout Europe. Based on the European and Spanish legislation (EU Regulations 2016/1141; 2017/1263; 2019/1262; 2022/1203; Spanish Royal Decree 630/2013) and Spanish Orders Order TED/1126/2020 and Order TED/339/2023)

It is worth to note that a total of 70 species included in the **LIFE medCLIFFS Consensus List** are plants catalogued as invasive and already prohibited in the current Spanish and/or European legislation. Its possession, transport, traffic and commerce implies the application of legal sanctions to those who fail to comply with these regulations. Those species are highlighted in red within the list.

---

<sup>1</sup> The **IAPS Working Group** has been created during action A4 of the LIFE medCLIFFS project. It is in charge of creating the prevention tools in action C4 (consensus, watch and white lists of plants; code of conduct) and is composed by 14 external experts and 6 members of the LIFE medCLIFFS project, coming from the gardening and plant production sectors, research and academia, and public land managers and technicians of the relevant administrations. The complete list of IAPS Working Group members is provided in the corresponding deliverable.

The remaining 24 species must not be planted or marketed, at least in the area of the project (i.e. Costa Brava and Cap de Creus), since they show an obvious invasiveness or a high potential to become invasive in the coming years within this area.

A selection of species is monitored by the LIFE medCLIFFS Volunteering Network in action C2 (a link to the corresponding factsheets is available in the list). The risk of invasion of these selected species is being modelled in action C1. For the most aggressive species in Cap de Creus (*Carpobrotus* spp., *Opuntia* spp. and *Gazania rigens*), action C3 of the project is developing effective methods for their control in coastal cliffs.

## Funding

LIFE medCLIFFS Towards an integrative management of Invasive Alien Plant Species in Mediterranean sea cliffs of European interest (LIFE20 NAT/ES/001223) is a nature conservation project financed by the LIFE program of the European Union working to improve the management of invasive alien plant species in the habitat of community interest 1240 – Mediterranean cliffs with endemic Limonium spp. and to guarantee the conservation of this habitat.

		1	2	3	4	5	6	
1	<a href="#"><i>Acacia dealbata</i></a>	X			X	X	X	
2	<i>Acacia mearnsii</i>					X		It is included in Annex II of the "potentially invasive species" of Royal Decree 1628/2011, but not in its subsequent editions, due to issues of territorial and management competences.
3	<i>Acacia melanoxylon</i>				X	X	X	
4	<i>Acacia saligna</i> (syn. <i>Acacia cyanophylla</i> )				X	X	X	In general, these species and some others from genus <i>Acacia</i> (eg., <i>Acacia cyclops</i> or <i>A. longifolia</i> ) are considered very problematic in the Mediterranean area.
5	<a href="#"><i>Agave americana</i></a>	X		X	X	X	X	
6	<a href="#"><i>Ailanthus altissima</i></a>	X	X	X	X	X	X	
7	<i>Alternanthera philoxeroides</i>	X	X			X	X	
8	<i>Ambrosia artemisiifolia</i>				X	X	X	
9	<i>Andropogon virginicus</i>					X	X	
10	<a href="#"><i>Araujia sericifera</i></a>	X		X	X	X	X	
11	<i>Arctotheca calendula</i>			X	X	X		Likely commercialized.
12	<i>Artemisia annua</i>			X		X		
13	<a href="#"><i>Arundo donax</i></a>	X	X	X	X	X		
14	<i>Asclepias syriaca</i>					X	X	
15	<i>Asparagus asparagooides</i>					X	X	
16	<i>Austrocylindropuntia subulata</i>				X	X	X	This genus has been often synonymized with <i>Cylindropuntia</i> , and all <i>Cylindropuntia</i> are prohibited according to the Royal Decree 630/2013.
17	<i>Azolla</i> spp.				X	X	X	Typically, <i>Azolla filiculoides</i> .
18	<i>Baccharis halimifolia</i>				X	X	X	
19	<i>Buddleja davidii</i>	X		X	X	X		
20	<i>Cabomba caroliniana</i>					X	X	
21	<i>Cardiospermum grandiflorum</i>					X	X
